This page helps you tell if a photo has been photoshopped, and lists websites that will show you if a photo has been "shopped." It's possible to tell if a photo has been manipulated, even if you don't have Photoshop. But for most of us, the best course of action is to compare the image with other similar photos taken before and after it was manipulated. You'll have to decide if you trust the site that you found the photo on or not. Some can be trusted and some aren't. But the information you gather will help you determine whether or not to go to Photoshop to fix the photo. Most of the rules that are listed below are similar to each other: When a website tells you that a photo is "unshopped," it means that the photo is what it appears to be -- a picture of what it is shown to be. When it says that a photo is "unsafe" or "unsafe for editing," it means that the photo could be altered on another site, or that you shouldn't be thinking about using Photoshop to fix the photo. Many of the rules that are listed here assume that the site that you're dealing with is a legitimate site that has their best interest in mind. If you find a photo that looks like it was manipulated, you should do your best to ensure that the person who took it is reputable. Only a few sites that answer the question "Are you Photoshopped?" are based in the United States. Advertisement Advertisement Advertisement Photo Stacking Websites to Find Photoshop Test Websites to find Photoshop Image stacking websites gather photos that are similar to the photo you're looking at, and superimpose multiple layers to determine if the photo you are looking at has been manipulated. If any photos in the superimposed image are altered, it shows that the photo you're looking at has been manipulated. Photo stacking sites are useful when you're looking at a photo that is in a different format than most online stores that sell high quality prints -- some of the more popular ones that list prices in the thousands of dollars don't display images in the web browser as they are downloaded. (See the list of web-based print stores, below) Print stores usually take a few minutes to retrieve the photo so you won't see the image while you're there. On other websites, such as 3DZoom and RealDome, you have to download or watch a video of

Q: Strange behavior with volatile in java I was having problems with the volatile keyword and static storage. The following code: `public class Test { public static volatile int test; public void set(int value){ System.out.println("set"); test = value; } public static void main(String[] args) { Test obj = new Test(); obj.set(100); System.out.println(obj.test); } }` results in: setting set 110 So, when the static variable test is read, its value is already set, which is ok. However, when the set() method is called, the value in the object is never updated, so it remains 100. I think this should be the default value for obj.test and obj.test should be set to 110 when the set() method is called, but this isn't the case. Why is this behavior happening? A: From the Java Language Specification section 8.3.1 (Volatile Fields): A volatile field can be assigned to while the field is being initialized. And: A local variable or parameter of type volatile-qualified class C can be assigned a value other than null while the variable or parameter is in a field declaration (§8.3.2.1, §14.4, §15.27.1.2, §15.27.3.1, §15.27.4.1, §15.27.4.2, §15.27.4.3, §15.27.4.4). The assignment occurs while the field is being initialized. When a method invokes the method declared in the final part of class Test: `public static void main(String[] args) { Test obj = new Test(); obj.set(100); System.out.println(obj.test); }` the method in this case is set, which is a void method. A method call is not a field access, and as such does not invoke a

Q: How to draw something on a button I just started to make some buttons on my app and i wanted to make them transparent but i just can't understand how to do it? Is it just a color red and its transparent? A: You can use alpha Make a color with code : `UIColor *color = [UIColor colorWithRed:255.0 green:255.0 blue:0.0 alpha:1.0];` And use alpha - `(void)drawRect:(CGRect)rect { CGContextRef context = UIGraphicsGetCurrentContext(); CGContextSetBlendMode(context, kCGBlendModeAlpha); CGContextSetAlpha(context, 0.5); //draw your rectangle }` It depends on your need, you can go further to draw your rectangle at a specific position at a alpha of 0.5 Intradetrusor OnabotulinumtoxinA injection therapy for patients with overactive bladder and low postvoid residual volume: safety and efficacy. The aim of this study is to evaluate the safety and efficacy of onabotulinumtoxinA in patients with low postvoid residual volume (PVR) and to investigate the impact of intradetrusor onabotulinumtoxinA (onabotA) injections on bladder overactivity (OAB) symptoms in patients with low PVR and no desire to void. Patients with low PVR who had cystometry and a maximum flow rate (Qmax) ≤ 12 mL/s and desire to void prior to onabotA therapy between August 2009 and March 2013 were prospectively enrolled. Patients were followed up every 3 months. OnabotA injection sessions were performed within 3 months of the first session. A total of 83 patients (mean age 57.7 ± 11.3 years) were included in the study. Patients underwent a total of 166 onabotA injections (mean 8.3 ± 3.2 per patient). Mean postvoid residual volume was 60.9 ± 46.1 mL. Mean percent change in Qmax after injections was $22.9 \pm 30.0\%$. Six patients reported adverse events (7.2%). One patient with previous bladder surgery had detrusor overactivity after the procedure. Median PVR decreased from 10.3 to 5
