Why "Windows Subsystem for Linux" and not "GNU/Windows"? #218

Hi

I'm totally convinced by the importance of having something like the WSL in Windows. Thank you so much for having integrated such a feature so nicely in Windows.

As far as I understand, the WSL is about making the ecosystem usually found in GNU/Linux or BSD systems able to access the Windows kernel. No other kernel than the Windows one is involved: neither the Linux kernel, nor the BSD kernel... So basically, the WSL is about running GNU ecosystem on top of the Windows kernel. Is that correct?

That might seem superficial as a remark, but I find it wrong that the WSL was named like that. I also find it unfair, because it puts credit on Linux rather that on the GNU project.

Something in the lines of "GNU/Windows" or "Windows Subsystem for GNU" would have been better in my opinion.

Am I the only one having such an opinion?

Kind regards

Frantret
